

## **Research Scientist, Waltham, Massachusetts**

### **Responsibilities:**

This is an exciting opportunity for a research scientist to join our team and work with the leader group on leveraging complement C3 inhibition to treat a wide range of diseases with the potential to dramatically change patient outcomes.

- Manage and grow Apellis' scientific library database
- Participate in the development of in vitro assays and in vivo studies.
- Work cooperatively with third party partners and collaborators.
- Identify and share new relevant discoveries with the team
- Write case report for new potential clinical programs
- Participate to the organization of our annual symposium

### **Qualifications:**

The ideal candidate must have a background in immunology and cell biology. Experience with complement, post-doctoral training and/or experience in biotech are advantages but not required. Team player.

- PhD in biology, biochemistry, immunology or related fields
- Strong immunology background
- Extensive experience in cell culture and animal experimentation

### **Skills, Knowledge & Abilities:**

- Keeping up with scientific literature is a big part of this position
- Excellent oral and written communication skills. All lab work is outsourced; therefore, the candidate must be skilled at communicating with collaborators.
- Good understanding of research scheduling and reporting procedure
- Highly organized
- Self-motivated and excited to work as a part of a team
- Multitasked

### **Apellis is...**

A clinical-stage biopharmaceutical company focused on the development of novel therapeutic compounds to treat disease through the inhibition of the complement system, which is an integral component of the immune system, at the level of C3, the central protein in the complement cascade.

We believe that this approach can result in broad inhibition of the principal pathways of the complement system and has the potential to effectively control a broad array of complement-dependent autoimmune and inflammatory diseases.
